

The Communications/Data Transformation that will Change ALL of our Ideas about HealthCare

Speaker: [David Smith](#) **SocialCare™**

The pace of change has never been greater and no industry is as ripe as Healthcare to take advantage of it. Many of the major systems in use today in healthcare can trace their roots back to the mainframe and client server technologies. In addition, most of the systems are closed systems and will not work with others. Technology, Regulatory, Demographics, Social Media, and Industry change are creating a perfect storm where change and transformation will create a new future and will transform the HealthCare Industry.

The Perfect Storm of events has happened to cause the healthcare industry to be ripe for innovation and disruption. This Perfect Storm is a combination of Government legislation mandating that all healthcare providers “digitize” and convert all paper health records to Electronic Health Records (EHR), forcing them to use a product from the current Health IT marketplace which is extremely outdated, cumbersome, and expensive. Also, with the passage of the Affordable Care Act (Obamacare), over 30 million uninsured Americans will qualify for health insurance coverage. That’s an influx of over 30 million new patients entering an already broken healthcare system that we have in this country.

The Perfect Storm

New HCFA quality standards
New purchaser demands

Regulatory

Internet

Disgruntled physicians

New technologies

New consumers

New tasks, new workers

IOT

“Healthcare is up next for transformation. Healthcare is the largest segment of our economy. Few people are satisfied with the current American healthcare system. It gets more expensive while innovations that actually improve the patient experience are rare. While there may be innovative new treatments and surgeries, basic functions for healthcare practices like storing and sharing electronic health records between physicians are still a pain.” – TechCrunch

“The past decade belonged to the rise of social networking. Now, with the passage of the Affordable Care Act, this is the decade for healthcare entrepreneurs.” – VentureBeat

Current State of Healthcare System

- Healthcare “System” is antiquated and not equipped to transform
- Government isn’t coming up with solutions
- Universities are focused on intellectual property vs collaboration
- Bringing solutions to market requires large players
- BUT Innovative solutions require nimble organizations
- AND Large players are not nimble
- GROWING Need for Rapid Innovation and Time to Market
- DISRUPTIVE Information Age an Opportunity to Reinvent the system

Drivers of Change in Health Care

- Increasing public accountability
- Privacy and Security
- Rise of sophisticated consumers
- 24/7 society
- Science and technology –particularly molecular biology, IOT, and IT
- Ethical issues to the fore

The Problem

- Between the health care we have today and the care we could have in the future lies not just a gap, but a large chasm
- A system full of underuse, inappropriate use, and overuse of care services and systems
- Unable to deliver today's science and technology; will be even worse with innovations in the pipeline
- But even today's innovations will not work in a broken system

A snapshot of some of the problems...

- Quality of care
 - U.S. residents receive about 50% of care that is recommended¹. Is this good? Acceptable?
- Individual expenditures
 - By 2025, average family premium will EQUAL median income
 - This means 50% of Americans will spend EVERY dollar they make on a health insurance policy.
- National expenditures
 - 21% of GNP is health care
 - 25% of economic growth between 2000-2005²

¹McGlynn EA, Asch SM, Adams J et al. The Quality of Health Care Delivered to Adults in the United States. *NEngl J Med.* 2003;348:2635-2645.

UNITED STATES HEALTH SYSTEM COVERAGE

- Richest country in the world
- Many Americans do not get the care they need
 - Ranked last of 23 developed nations in providing universal care (Commonwealth Fund)
 - 45 million (15% of population) have no health insurance
 - Millions are “underinsured”
- Not curing people with curable diseases?
- Risk of financial ruin due to medical bills
 - Medical bankruptcy is a unique American problem
 - 60% of bankruptcies are a result of medical bills
 - Approximately 700,000 Americans/year

SAVING OUR FUTURE REQUIRES TOUGH CHOICES TODAY...

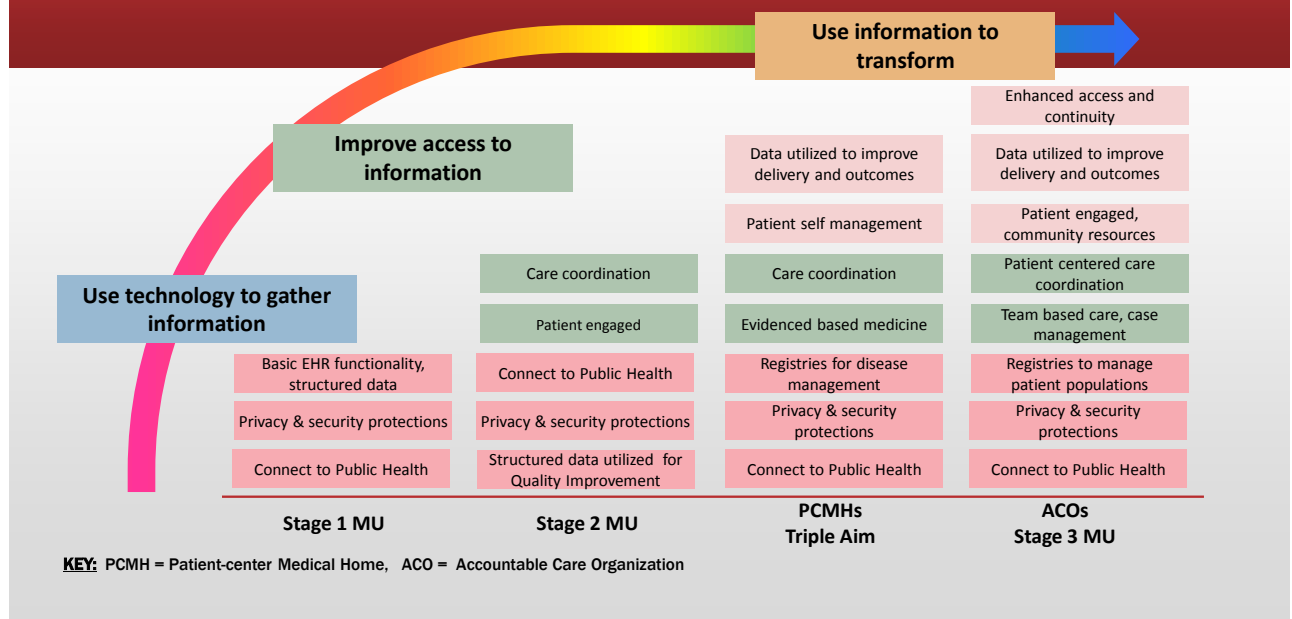

The Honorable David M. Walker,
Comptroller General of the USA

- “Our single largest domestic policy challenge is healthcare”
- The truth is, our nation’s healthcare system is in critical condition. It’s plagued by growing gaps in coverage, soaring costs, and below average outcomes for an industrialized nation on basic measures like error rates, infant mortality and life expectancy.

Healthcare**

Federal Roadmap Since 2010 to 2025

30% use at least one Internet-enabled application for core business and clinical functions

General medical research and news	71%
Access guidelines or protocols	50%
Submitting claims and claims status inquiry	35%
Diagnostic reporting (order or lookup data)	34%
Access pharmaceutical information	34%
Information technology support	31%
Communicate with patients (by email)	29%
Eligibility authorizations	29%
Purchase medical products	29%
Referral authorization	24%
Receive payments, earned remittance	21%
Electronic medical records	19%
Data analysis	18%
Document patient encounters	10%
Order and verify prescriptions	7%

n = 215

Over 80% agreed Internet applications were essential or important

Percentage of physicians who say...	Essential	Important	
General research, news gathering	45%	44%	89%
Diagnostic reporting (order, look up)	43%	45%	88%
Eligibility authorizations	43%	43%	86%
Assessing guidelines, protocols	31%	53%	84%
Submitting claims; claims status inquiry	38%	46%	84%
Information technology support	35%	49%	84%
Referral authorizations	38%	42%	80%
Accessing pharmaceutical information	31%	53%	84%

Entering the Age of Data

- **Data is THE central business asset:**
 - “Data are an organization’s sole, non-depletable, non-degrading, durable asset. Engineered right, data’s value increases over time because the added dimensions of time, geography, and precision.” (Peter Aitken)
- **Data generation has changed forever**
 - Instrumentation of All businesses, people, machines
- **Data is born digitally and flows constantly**
 - “All things are flowing..” (Heraclitus, 500 BC)

Challenges ahead: Clinical devices, biotechnology and pharmaceuticals *converge with IT*

Organ Assistance and Substitution

- In the next two to five years, the novel organ assistance and substitution devices most likely to be developed and reach the market include
 - bioartificial liver assist devices that utilize live hepatocytes
 - an artificial lung known as an intravenous membrane oxygenator (IMO) that will perform short-term rescue in patients with acute respiratory distress (Hattler Respiratory Catheter)
 - an artificial retina that will restore limited sight in blind patients with retinal diseases
 - implantable, closed-loop artificial pancreas systems

Targeted Clinical Conditions: OAS Technologies

Category	Diseases/Conditions
Artificial Retina	Retinitis Pigmentosa (RP) Age-related Macular Degeneration (AMR)
Bioartificial Liver	Acute and Chronic Liver Failure - Hepatitis - Alcoholic Liver Disease - Toxins
Bioartificial Kidney	Acute and Chronic Renal Failure - Diabetes - High Blood Pressure - Glomerulonephritis
Total Artificial Heart/ Ventricular Assist Device	Acute and Chronic Heart Failure - Congestive Heart Failure (CHF) - Coronary Heart Disease (CHD)
Artificial Lung	Acute and Chronic Pulmonary Failure - Chronic Obstructive Pulmonary Disease (COPD); primary causes are chronic bronchitis and emphysema - Cystic Fibrosis - Primary Pulmonary Hypertension
Artificial Pancreas	Diabetes Mellitus - Type I - Type II - Gestational Diabetes
Artificial Bowel Sphincter	Severe Fecal Incontinence

The Patient Will Become the Nucleus of Healthcare

Healthcare Horizons

Horizon	2010	2025
Centers of Care	Institutions Clinics, surgery centers & hospitals	Home Avatar, online, "smart" technology
Gatekeeper	Primary care physicians	AI via portable electronic diagnostics and automated "care"
Genetics	Simple - Testing for simple disorders reaches affordability critical mass (\$350/profile)	Universal - Testing, treatment and prevention is mainstream including reproductive health
Implants & Prostheses	Manmade materials surgical repair materials, drug delivery, and synthetic biochemical materials	Regenerative biochemical process and technological advances (regenerative organs, artificial haemoglobin, etc.)
Longevity	Degenerative 80 to 90 years, aging and metabolic breakdown	Nearly non-degenerative 125+ years, increased quality of life
Hospitals	Treatment center for disease - LOS in days	Teaching center for patients, - LOS in hours

Facilitated Disease Network

Big name vendors offer free avatar-based health coaching if other integrated health products and services are purchased

**Where
Americans
receive
primary care:**

40% Consumer Directed Health Plans – self-managed care

40% Health Systems and Groups – primary care relationship in integrated systems

10% Concierge Practices – sophisticated personalized care

10% Uninsured – use ER and CHC when they have to

51

No frills airlines to no frills care?

You get what you pay for

The journey of creating the future

"The healthcare system as it is now looks nothing like a capitalist market in which competition pushes prices down and consumers make informed tradeoffs between price and quality. "

"The difficulty bringing free-market forces to the healthcare industry helps explain why Americans spend the most on healthcare, with only mediocre results. If we're lucky, market forces are beginning to have a tangible, if subdued, impact. We need a lot more."

Thank You!

David Smith
